DSSAT Practice Test Questions and Answers

1. What does DSSAT typically stand for in agricultural modeling?

A) Decision Support System for Agrotechnology Transfer

B) Data Science for Sustainable Agriculture Technology

C) Digital Soil and Seed Analysis Tool

D) Dynamic Systems for Soil Assessment and Testing

2. Which component is essential for crop simulation in DSSAT models?

A) Only rainfall data

B) Weather data, soil characteristics, and crop management practices

C) Only soil type information

D) Only crop variety selection

3. What is the primary purpose of using DSSAT in agricultural research?

A) To replace field experiments entirely

B) To simulate crop growth and evaluate management strategies

C) To control weather patterns

D) To eliminate the need for soil testing

4. Which factor is most critical for accurate DSSAT model calibration?

A) Market prices for crops

B) Quality field data for model validation

C) Government agricultural policies

D) Farmer education levels

Answers: 1-A 2-B 3-B 4-B
